Hello,

The following submission has been
created.

Track Name: Security & Privacy

Paper ID: 1800

Paper Title: Cyber Crisis Management
Using The NIST Cybersecurity
Framework 2.0

Abstract:

With the rapid growth of digital
technology, cyber threats such as
ransomware, phishing, and data
breaches are increasing across
organizations worldwide. These
attacks can disrupt operations, cause
financial losses, and damage

organizations worldwide. These attacks can disrupt operations, cause financial losses, and damage reputation. This research paper focuses on Cyber Crisis Management (CCM) using the NIST Cybersecurity Framework (CSF) 2.0. It explains how the six core functions—Govern, Identify, Protect, Detect, Respond, and Recover—help organizations manage and reduce cyber risks effectively. The paper also discusses real-world cyber incidents and highlights the importance of risk management, governance, business continuity, and threat intelligence in improving cyber resilience. The study concludes that effective cyber crisis management requires both technical security measures and strong organizational planning to prepare for and recover from cyberattacks.
